

SENIOR SPOTLIGHT

“

My favorite thing about my internship was seeing how people worked together to solve complex problems. Actually being there to help them and see the process they used to break the problem down has helped me in my own situations. During my time at my internship I learned to be more confident. I learned to ask for help and not to be afraid to make mistakes. The internship narrowed what field of software development I wanted to go into.

I plan to go to Kirkwood and then transfer to Iowa State University to pursue a degree in software engineering.
